

# TouchPoint and ViewPoint Accessories

Electronic medical records (EMR) have changed the workflow in hospitals and, ultimately, the delivery of care. Caregivers constantly interface with technology in today's healthcare environments. In addition to working with technology, caregivers must continually interact with patients.

The global leader in healthcare ergonomics, Humanscale has identified solutions to optimize the caregiver workflow. The ViewPoint and TouchPoint accessory lines were created to improve the efficiency and effectiveness of caregivers in the non-stop healthcare setting.

The Global Leader in Healthcare Ergonomics

The TouchPoint accessories line was designed with the caregiver workflow in mind. As caregivers move through tight corridors and patient rooms, it is essential for the cart's accessories to remain secure. To ensure that these items do not fall off the cart or hit walls, the TouchPoint accessories fit within the footprint of the cart and are fixed on an accessory rail.

**ViewPoint and TouchPoint accessory lines include**

- Scanner bracket
- Sharps container
- Glove box holder
- Hand sanitizer holder
- Chart holder

**ViewPoint mounting options include**

- V6 track for accessory mounts with 19" rail or 27" rail
- Solo with accessory mount with 19" rail or 27" rail
- VESA accessory mount with 19" rail and optional handle, or 27" rail and optional handle

**TouchPoint mounting options include**

- T7 VESA accessory mount with 19" rail or 27" rail

Humanscale's ViewPoint accessories line optimizes our range of technology wall stations to streamline workflow requirements and enhance caregiver performance. Three mounting options and two rail lengths are available, making the accessories well-suited for nearly any application.
